Turmeric (*Curcuma longa* L.) is one of the most important spice crop cultivated in India. India is considered as the largest producer, consumer and exporter of turmeric in the globe. Turmeric is affected by anthracnose, so for its management non-systemic fungicides evaluated under *in vitro* condition, the highest per cent inhibition was obtained by thiram followed by ziram, chlorothalonil and copper hydroxidein inhibiting the growth *C. capsici* at all the four different concentrations tested viz. 500, 1000, 1500 and 2000 ppm.

**Key words:** Non-systemic fungicides, *Colletotrichum capsici*
